Factory audit & technical patents

Has many factory audited certifications. A number of patent certifications.

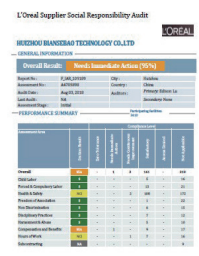

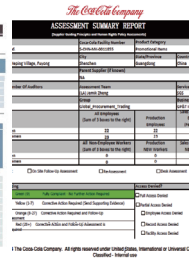

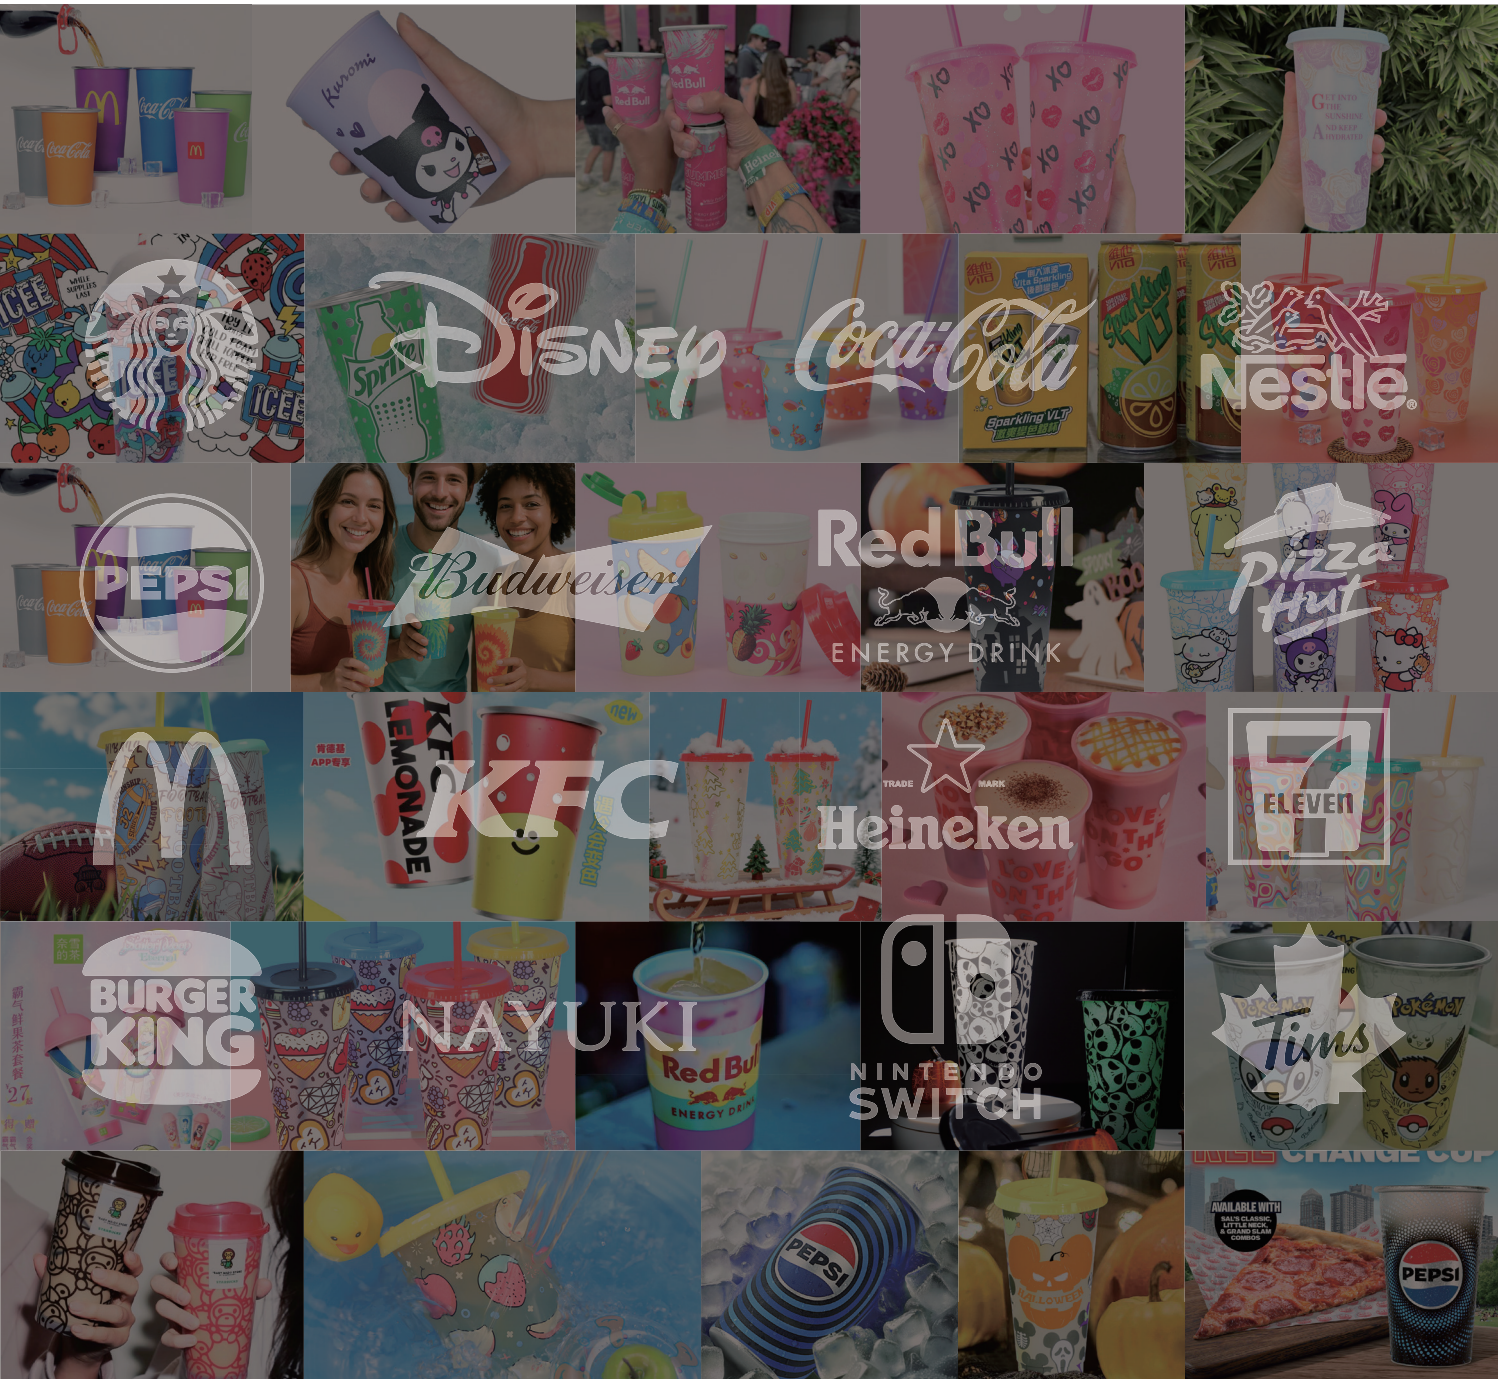

Our Client

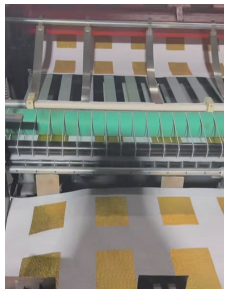

The top brands in various industries around the world are our customers

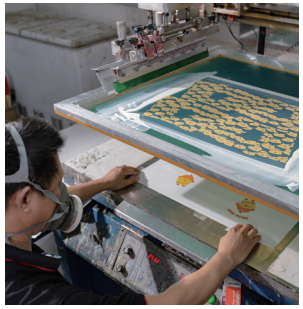

Our technology

Water Transfer

Foil Stamping

Screen Printing

Offset Printing

Roll Printing

We are equipped with various professional manufacturing techniques and can produce products tailored to your needs.

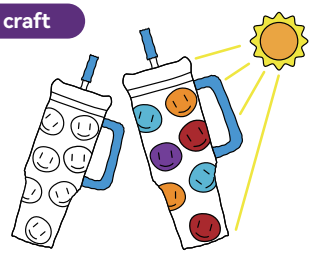

About our color changing craft

Cold color changing craft

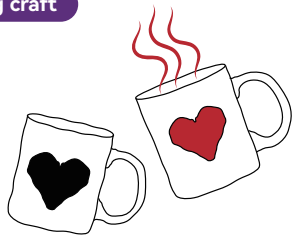

The user pours liquid below a certain temperature into the cup. After the temperature is transmitted to the cup or pattern, the cup or pattern changes. When the temperature is not up to the condition, the cup or pattern recovers. The lower thetemperature, the more obvious the change , the cold change is usually light to dark.

UV color changing craft

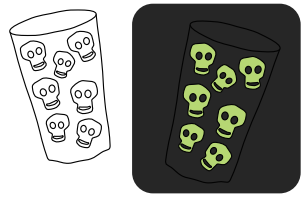

Place the product in sunlight. The pattern will change when exposed to sunlight, and return to its original state when removed from sunlight.The stronger the sunlight, the more obvious the change, usually from light color to dark color.

Hot color changing craft

The user pours liquid higher a certain temperature into the cup. After the temperature is transmitted to the cup or pattern, the cup or pattern changes. When the temperature is not up to the condition, the cup or pattern recovers. The higher the temperature, the more obvious the change , the hot change is usually dark to light.

Luminous Material craft

When the cup is placed in a dark environment, the patterns or the luminous material on the cup will glow. When the cup is removed from the dark environment, it will return to its original state.

Color changing card

COLD COLOR CHANGING CARD

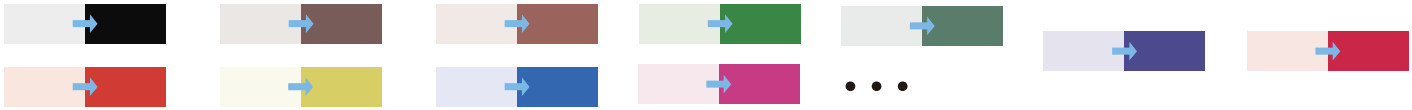

We have years of practical experience in the color-changing field and can fully realize customers' designs. Below are the common color-changing shades and logic.

CLEAR TO COLOR SERIES

There is a slight background color before discoloration, and the color rendering of the background color is roughly 10%-20% of the color after discoloration.The color after discoloration can be determined according to the Pantone color number.

Here are some practiced color-changing swatches for reference

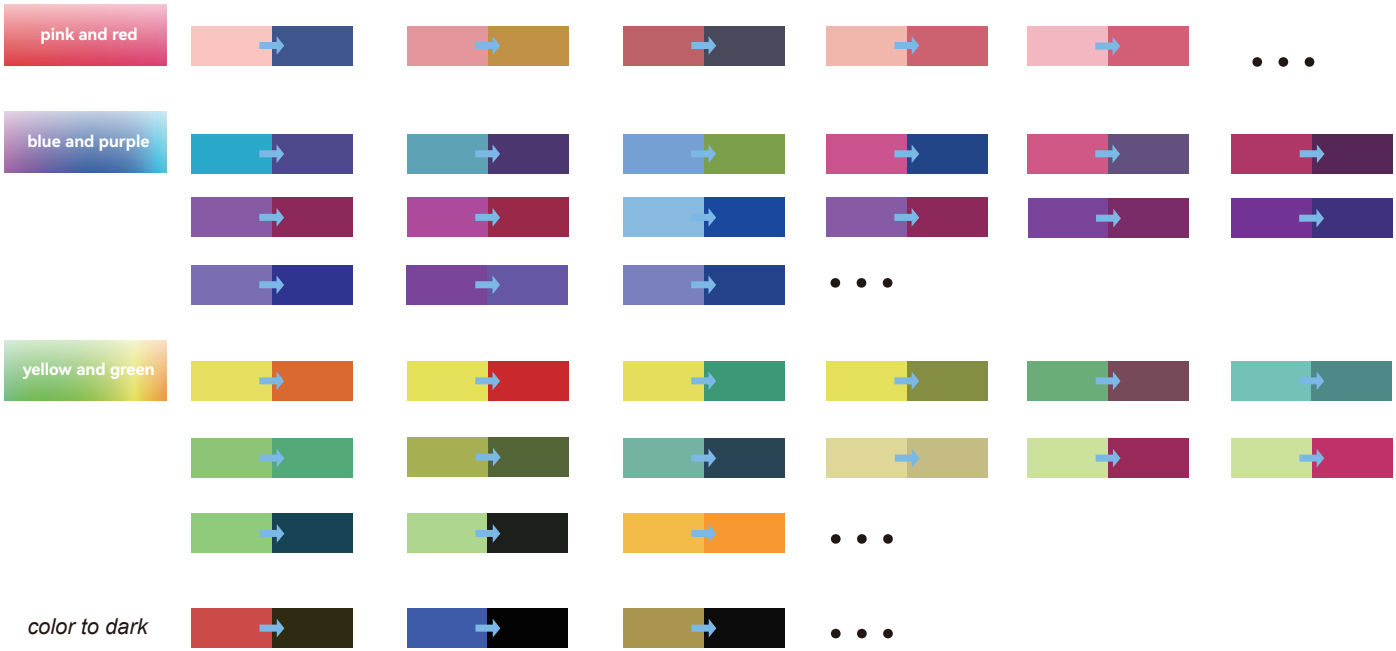

COLOR TO COLOR SERIES

Color to color follows the principle of addition of colors, e.g. if you mix two colors together while painting, you can come up with a new color (The color after discoloration is darker than the color before discoloration)

Here are some practiced color-changing swatches for reference

MUGBABY
Color changing card

UV COLOR CHANGING CARD

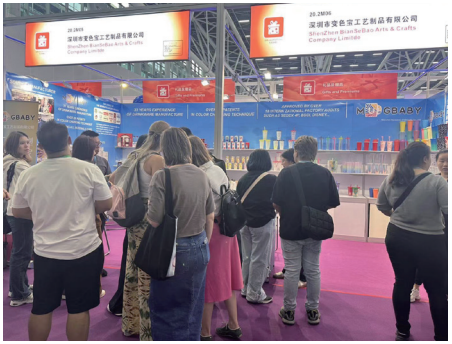

We have years of practical experience in the color-changing field and can fully realize customers' designs. Below are the common color-changing shades and logic.

It has a slight base color before changing color. Under normal indoor lighting, the saturation of the base color is about 5%–10% of the color intensity after the color change.

#1	#2	#3	#4	#5	#6
#7	#8	#9	#10	#11	#12
#13	#14	#15	#16	#17	#18
#19	#20	#21	#22	#23	

AFTER THE CUP ENCOUNTERS ULTRAVIOLET LIGHT
THE PATTERN ON THE TUMBLER WILL APPEAR
